TRA: **NA**  
Speed Rating: **A8**

The Galaxy Magna Trak UT-77 is engineered for utility tractors and material handlers. The UT-77 features a hybrid tread design that combines elements from both an R-1 tire and an R-4 tire. The lugs are wide like those of an R-4 for exceptional wear characteristics and stability but are circumferentially oriented like those of an R-1 for superior traction in soft or muddy conditions and good on-road characteristics. The UT-77's wide, flat tread design further enhances stability when lifting heavy loads.
